The fund

Fund performance objective and benchmark

The investment objective of the fund is to provide a return in line with money market rates or preserve the value of the investment. The fund intends to maintain a stable Net Asset Value per Share of £1.00 for any Distribution Class. The Fund seeks to achieve its investment objective by outperforming its benchmark, the Sterling Overnight Index Average (the "Benchmark"). The Benchmark reflects bank overnight funding rates in Sterling. The Benchmark is being used by the Fund for performance comparison purposes only and the Fund does not intend to track the Benchmark.

Benchmark: SONIA (Sterling Overnight Index Average)

Performance commentary

Money market rates were relatively stable through 2024 with just two rate cuts from the Bank of England in August and November. Longer maturities have been somewhat more volatile given the changing rate expectations, but even this has been relatively limited – taking two-year gilts as a proxy, yields spent most of the year in the 4% to 4.5% range. Within our money market exposure, we have been relatively measured, looking to extend selectively where yields were attractive, but often finding that we could achieve good yields without needing to add significant interest rate risk.

Performance was positive over the quarter compared to the SONIA benchmark. At a portfolio level, we had built up a yield premium to the benchmark. Our money market exposure was the main driver of returns, reflecting that this makes up the bulk of the fund’s assets, while exposure to repo and treasury bills also contributed to returns – these being attractive given the yields on offer and the higher level of security and liquidity these provide.

Performance and activity

Fund activity

We still focus on short paper – reflecting the fund’s objective. Activity in the quarter was aimed initially at reducing exposure to securities maturing ahead of year end, where liquidity is sometimes more restricted. We build this into our portfolios through careful management of maturity dates, but also through active trades – for instance selling Goldman Sachs CDs that were due to mature in late November and using the proceeds to add new four-month CDs from the same issuer. We added selectively to longer dated paper as well, through purchases of including six-month CDs from DNB and Bank of Nova Scotia and one-year CDs from Swedbank, all highly rated issuers in our universe.

Activity was reduced into year-end, reflecting lower market activity levels and the strong positioning of the fund both in terms of yield and maturity profile, allowing overall portfolio duration to drift slightly lower by the year end.

Market commentary

Market overview

Markets were volatile during the fourth quarter – with the US elections and the potential for central bank rate cuts the main causes of uncertainty. With the election of Donald Trump as US President, and the Republicans having a majority in both the Senate and House of Representatives, markets moved to price in potentially higher US deficits.

Alongside political events, attention remained on the Federal Reserve, European Central Bank and Bank of England to see if expected rate cuts would materialise. However, with inflation remaining higher than central bankers would like, expectations for rate cuts in 2025 were revised down. This backdrop pushed government bond yields higher, leading to negative absolute returns for most investment grade credit markets despite credit spreads tightening and credit excess returns over government bonds being positive, while equities ended a strong 2024 with another positive quarter, with US stocks – notably the ‘magnificent seven’ – leading the way.

At its final meeting of 2024, and as expected, the Bank of England kept rates on hold at 4.75%. Meanwhile, according to the minutes, “a gradual approach to removing monetary policy restraint remains appropriate.” November CPI inflation rose to 2.6% year-on-year as expected on ‘base effects’. Pay growth was stronger than expected. October GDP shrank month-on-month after falling in September, with this contraction (and subdued business surveys since) raising the risk of a mild GDP contraction in the fourth quarter. Away from economic data, the new Labour government presented its first budget. This was less obviously a budget for growth than one for public services repair with a substantial proposed increase in day-to-day fiscal spending and net investment. Public spending was increased substantially, but at the cost of a big increase in taxes. Since the Budget, business optimism has dropped, and firms are indicating a mix of responses to the rise in National Insurance contributions including hiring less and raising prices.

The Federal Reserve cut rates 50bps over the quarter to a 4.25% - 4.5% target range. They signalled fewer cuts for 2025 than previously indicated, indicating only 50bps cuts for 2025 (100bps previously). In November, Donald Trump was elected US President for the second time. A Trump presidency will likely bring a change in both policy making style and substance. It was a clean sweep for the Republicans, winning the White House, Senate and House of Representatives, increasing the prospects of Trump getting his fiscal policies through.

Government bond yields rose over the quarter, as central banks continued to struggle to bring inflation back to target levels and amid ongoing political volatility with elections across Europe and the US. In the US, 10-year treasury yields rose to 4.57% from 3.78%, while German 10-year

bunds similarly saw yields rise to 2.36% from 2.06%. Benchmark 10-year gilt yields increased to 4.57% from 4.01%.

UK money market rates were flat for the first half of 2024, reflecting that attention was on the Bank of England and a first rate cut in this cycle. After the rate cut in August, SONIA started the fourth quarter at 4.95%, falling to 4.7% following the November rate cut. Two-year gilts, often seen as a proxy for market expectations of BoE rates, started at 4.00% but trended higher throughout the period – reflecting the potential increase in gilt supply under the new government, as well as lower expectations of rate cuts.

Outlook

Market pricing of UK interest rates in 2025 has changed over the past quarter. Having priced in year-end rates of 4% at the start of October, the market is now expecting base rates of 4.25% by December 2025. In our view, expectations have been overly optimistic throughout 2024, but now appear more realistic – in simple terms, the low growth backdrop gives the Bank of England scope to cut rates, but with inflation still lurking, that scope is limited. As we laid out in our end of year Outlook, while stagnant growth and high inflation are termed Stagflation, we see more of a ‘Bambi’ inflation scenario, with unexciting growth and sticky inflation.

With rate expectations now more realistic, and relatively few cuts priced in for 2025, we retain a cautious stance in the funds in terms of duration. These funds are more cautious than other areas anyway, but even within that remit, we do not feel market rates are at levels that make extending maturities attractive. As a result, we are focused more on maintaining attractive overall yields rather than implementing a rate ‘view’, making use of floating rate exposure to help manage volatility in rate expectations.

In general, we have been cautious for most of 2024 on both maturities and credit risk. We remain comfortable with this approach, given our view that credit risk within the very short-dated space is not particularly well rewarded, and are therefore to have higher than normal exposure to areas such as treasury bills or gilts.

Our liquidity and short term fixed income funds do not have specific ESG objectives, but we continue to incorporate assessment of ESG risks into our holdings. While the primary consideration in looking at a bank will be assets and cashflows, ESG risks are also material. In addition, we believe that our exposure to covered bonds also helps manage risk, with these being regulated instruments and exempt from bail-in, so if a bank does get into difficulty, these assets are not bailed into the wind-up process.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Stable NAV risk

The Fund is not the same as a bank deposit account. It is designed such that it will seek, for the Distribution Classes, to maintain the Net Asset Value per Share at a fixed value by distributing income from the Fund as it arises. However, whilst the Fund's investments are reasonably believed by the Investment Manager to be of high quality, there is always a risk that an underlying issuer could default or otherwise fall in value, resulting in the Fund being unable to maintain the Net Asset Value per Share at a fixed value and therefore a loss of capital will occur. The risk of loss is to be borne by the investor. There is no representation or warranty that the Fund will be able to maintain a stable Net Asset Value per Share.

Inflation risk

Where the income yield is lower than the rate of inflation, the real value of your investment will reduce over time.

Money market fund risks

A Money Market Fund is not a guaranteed investment, and is different from an investment in deposits. The principal invested in the Fund is capable of fluctuation and the risk of loss of the principal is to be borne by the investor. The Fund does not rely on external support for guaranteeing the liquidity of the Fund or stabilising the NAV per share.

Responsible investment risk

The Fund can only invest in holdings that demonstrate compliance with certain sustainable indicators or ESG characteristics. This reduces the number securities in which the Fund can invest and there may as a result be occasions where it forgoes more strongly performing investment opportunities, potentially underperforming non-sustainable funds.

Sterling Liquidity Money Market Fund

The Fund has been authorised as a Low Volatility Net Asset Value (LVNAF) MMF and is a short-term money market fund in accordance with MMF Regulation which seeks to maintain a stable NAV under the condition that the stable NAV does not deviate from the Net Asset Value per share by more than 20 basis points. In case of a deviation of more than 20 basis points between the stable NAV and the Net Asset Value per share, the following redemption or issue of Shares will be undertaken at a price that is equal to the Net Asset Value per Share.

Glossary

Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

Duration

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

Fund value

Total value of the fund as of the last business day of the calendar month. The fund value is as at close of business and on a mid-price basis.

Gross redemption yield

Gross redemption yield is the rate of discount at which a bond's future obligations of interest and capital payments equates to its current price. The gross redemption yield shown for the fund is the average for its individual holdings, weighted by their current value, net of relevant fund management costs and gross of tax.

Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

Performance

Performance is calculated using the daily end of day NAV per share produced by HSBC based on the mid price.
